Profile Summary

Software Engineering student with strong foundations in **Java, Spring Boot, React.js, and Data Structures & Algorithms**. Experienced in building **scalable full-stack applications, REST APIs, and AI-driven systems using Python and FastAPI**. Passionate about solving **complex problems** and designing **efficient backend systems**. Seeking to contribute to **large-scale software systems** in a collaborative engineering environment.

Education

koneru lakshmaiah University (KL University)

Expected May 2028

Bachelor of Technology in Computer Science (Honors in AI & Autonomy) – GPA: 9.27 / 10.00 Vijayawada, Andhra Pradesh

Narayana Junior College Name

2022 – 2024

Intermediate (MPC) – Percentage: 95.4%

Nellore, Andhra Pradesh

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems (DBMS), Operating Systems, Enterprise Software Architecture (Spring Boot & React), Probability & Statistics

Technical Skills

Languages: C, Java, JavaScript, SQL, Python (Pandas, NumPy)

Backend Frameworks: Spring Boot, Hibernate ORM, Spring Security, Spring Data JPA, RESTful APIs

Frontend: React.js (Hooks, Router), HTML5, CSS3

Database: MySQL

Tools: Git/GitHub, Maven, n8n, Swagger/OpenAPI (for API testing)

Concepts: Object-Oriented Programming (OOP), Microservices Architecture, JWT Authentication

Certificates

GitHub Copilot Certification – Microsoft

Issued Nov 2025

NPTEL – Introduction to Artificial Intelligence and Machine Learning

Issued Nov 2025

Certified Essentials Automation Professional – Automation Anywhere

Issued Feb 2026

Projects

Participate+ (Student Activity Management Platform) | Spring Boot, React.js, Hibernate, MySQL

- Developed a full-stack platform to manage student clubs, sports, and campus events.
- Implemented role-based access control for Admin and Student to manage event scheduling, registrations, and participation tracking.
- Simplifies the organization of campus activities while helping students easily discover and participate in extracurricular events.

DonorHub (Donation Management Platform) | React.js, Node.js, MongoDB

- Built a web platform to support the donation and distribution of essential items during emergencies.
- Designed role-based modules for Admin, Donor, Recipient, and Logistics Coordinator to manage donations and requests efficiently.
- Enables communities to connect donors with people in need and streamline the coordination of relief resources.

Hippocria (Healthcare Assistance Chatbot) | Python, FastAPI, LangChain, ChromaDB, Ollama

- Created an AI-powered healthcare chatbot using a Retrieval-Augmented Generation (RAG) pipeline.
- Integrated semantic search with ChromaDB and built REST APIs using FastAPI for chat interactions.
- Provides users with accessible medical information and basic symptom guidance while encouraging professional medical consultation when necessary.
